

LATITUDE  
panellist

Panellist is a naturally flexible wall system which allows the specifier or project designer freedom to develop to their own specific needs. Using this simple back panel to suspend a whole range of elements is a simple yet effective creative process.

The applications are endless; from hotel guest suites & commercial working environments to the 'home office'. The availability of a wide range of finishes can produce a very individual result.

We understand that space is becoming more of a premium day by day. By putting Panellist on your

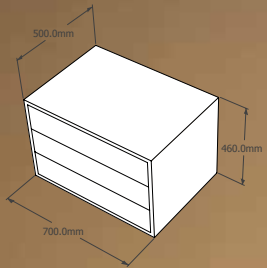

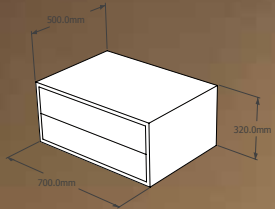

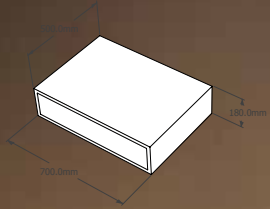

wall you concentrate the different elements such as wardrobe, vanity unit, mini bar, drawer units etc into one space reducing normally required 'traffic' areas. The effect is a physical reduction in space, a cleaner visual and not least an economical installation.

From a maintenance aspect Panellist, as it is suspended off the floor, makes housekeeping quick and simple.

Panellist is also a sound proofing membrane and can help to reduce noise levels by using fabric or specifically designed materials as the panel cover.

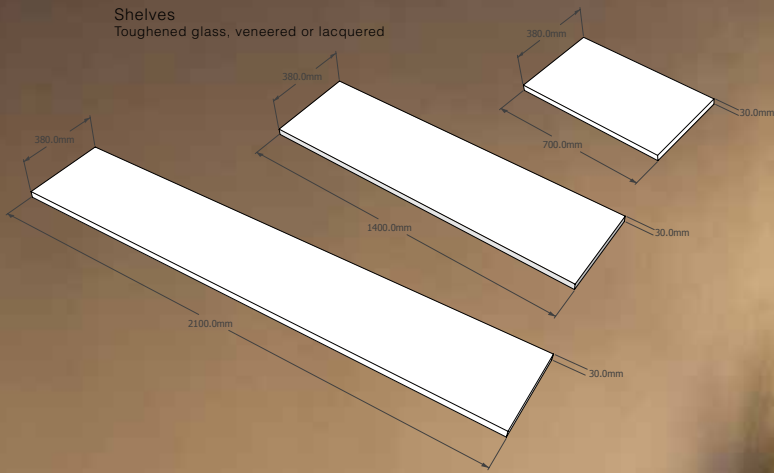

### Drawer Units

Veneered, laminated or lacquer fronts

### Shelves

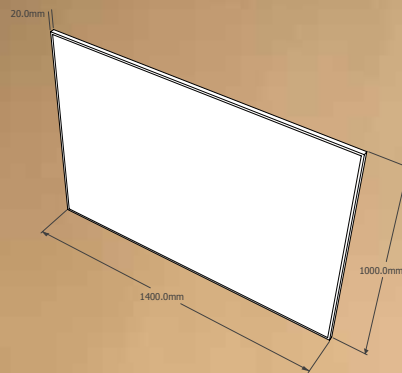

Toughened glass, veneered or lacquered

### Headboard

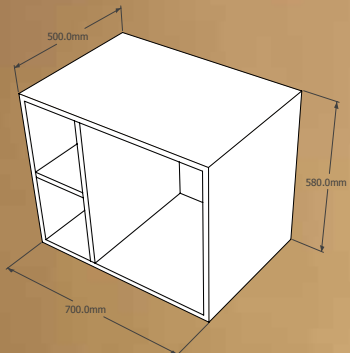

Frame: solid wood beech natural or stained and walnut.
